Political Economy

The evaluation of the trade, production and how it intertwines with government and law, but more importantly how they work together to elevate one another.

Economics

Economics is the study of how individuals and groups make decisions with limited time, which truly encapsulates the central focus when spotlighting political economy.

Reason for Research

Money is constantly flowing in and out of society, and it is important to know how much exactly, what are you profiting most from, and where are you allocating the profit to benefit your society in the best way possible.

Economic Theories

- Socialism, complete balance because of the massive government intervention and they ultimately control businesses, and money input, output as a whole
- Capitalism, one of the founding factors is Laissez-Faire. Limited or less government intervention will ultimately result in the benefit of the country.

Political Capitalism

- “Political capitalism is an economic and political system in which the economic and political elite cooperate for their mutual benefit”

Foreign Aid

- “The Marshall Plan to rebuild Europe was designed to blunt the influence of rising Communist political forces on the continent. National security concerns have continued to drive U.S. assistance policy, aiming to provide stability in conflicted regions, bolster allies, promote democracy, or contribute to counterterrorism and law enforcement efforts abroad”

Foreign Aid Cont'd

- “More than two hundred countries receive U.S. aid. It disproportionately goes to a few, however, with the top five all receiving over \$1 billion per year as of 2016”
